

BEAUDESERT EXHAUST

The right exhaust will keep you powering through any terrain

The finished product

Exhausts are one of the easiest ways to gain extra power while also improving your fuel economy. Factory exhausts can be restrictive and limit the amount of exhaust gases that flow from engine to tailpipe, so a larger aftermarket exhaust is a sure-fire way to liven things up.

Beaudesert Exhaust has been producing aftermarket systems out of its headquarters for almost 30 years. The team utilise a range of CNC mandrel-bending machines to ensure each exhaust is manufactured to the highest standard.

By increasing the flow of gases that exit the combustion chamber and make their way down the exhaust, the Beaudesert systems have been able to produce (on average) an increase of around 12% and an increase in fuel economy of over 10%. Savings are savings, and the more you can save, the longer you can stay out on the tracks!

CURRENT TRENDS

Beaudesert Exhaust is particularly adept at keeping on top of new model releases, conducting extensive research and development in order to have new systems on the market as close to the release date of any new vehicle. Recently Beaudesert has begun offering systems to suit the Volkswagen Amarok, 2011 Ford Ranger and the NT Pajero.

CNC benders are used to ensure maximum accuracy

SPECIAL OFFER

Contact the team at Beaudesert Exhaust and mention this 4WD Action special offer by using the code BEA212 when ordering your new exhaust and receive 10% off the cost of your new system and 50% off the cost of shipping! **Hurry, offer only valid until 15/3/2012.**
